PROFESSIONAL SUMMARY

Infrastructure and backend engineer with 5+ years of cross-functional experience across server operations, software development, financial systems, and business-critical support. Hands-on Linux administrator for Ubuntu/Debian production environments, currently responsible for a 6-node high-availability trading infrastructure spanning Nginx, Docker, PostgreSQL, Redis, Prometheus/Grafana, backups, security hardening, and incident response. Electronics Engineering graduate with strong Bash/Python automation, networking, database, troubleshooting, and deployment skills, with practical experience supporting both financial trading platforms and electricity-sector accounting systems.

CORE TECHNICAL SKILLS

Linux Administration: Ubuntu, Debian, CentOS/RHEL fundamentals; users and permissions, SSH key-based access, systemd, cron, package/kernel/security updates.

Web & Reverse Proxy: Nginx reverse proxy, SSL/TLS termination, HTTP-to-HTTPS redirection, load-balancer origins; Apache fundamentals.

Databases & Caching: PostgreSQL, MySQL/MariaDB, Redis; roles and permissions, Alembic migrations, PgBouncer pooling, backup and restore.

Security: UFW/iptables, Fail2Ban, SSH hardening, Cloudflare Origin and Let's Encrypt certificates, Redis authentication, WAF/DDoS protection, patching.

Monitoring & Logs: Prometheus, Grafana, Alertmanager, node-exporter, postgres-exporter, redis-exporter, journalctl, Nginx logs, Docker logs.

Containers & DevOps: Docker, Docker Compose, Git, deployment and rollback workflows, multi-service production stacks, staging and release validation.

Networking: TCP/IP, DNS, ports, firewall rules, reverse proxies, Cloudflare Load Balancer, SSL termination at edge and origin.

Automation & Backend: Bash, Python, FastAPI, SQL, Laravel, REST APIs, Locust load testing; React, Angular, Next.js familiarity.

PROFESSIONAL EXPERIENCE

Linux Server Administrator & Backend Engineer - Bona FX (Financial Trading Company) | Remote | Apr 28, 2026 - Present

- Sole administrator of a 6-node Ubuntu production infrastructure powering a real-time MT5 trading bridge between a Laravel platform and MetaTrader 5.
- Administer two high-availability application nodes, a dedicated PostgreSQL server, a Redis server, a monitoring server, and a staging/load-testing node.
- Configure Nginx reverse proxies and SSL/TLS termination with Cloudflare Origin certificates behind Cloudflare Load Balancer; enforce secure origin communication and HTTP-to-HTTPS redirection.
- Operate Docker Compose production services including a 13-worker Gunicorn/FastAPI API tier, a leader-elected hot-standby risk engine with automatic failover within 15 seconds, and PgBouncer.
- Manage PostgreSQL roles, permissions, Alembic schema migrations, transaction-mode pooling for up to 1,000 client connections, and network isolation from direct application-node DB access.
- Run Prometheus, Grafana, Alertmanager, and exporters; build dashboards and alert rules for CPU, memory, disk, container health, service heartbeats, and financial-engine liveness.
- Maintain Bash deployment and rollback automation for repeatable, zero-downtime releases across HA nodes, supported by troubleshooting and rollback runbooks.
- Harden servers using SSH key-only access, service-specific firewall policies, Redis authentication, security updates, and Cloudflare DDoS protection.
- Perform log analysis and incident response across Nginx, Docker, and application logs; maintain backup and recovery procedures for databases, queues, and server configuration.
- Run pre-release Locust load tests against a staging MT5 simulator before production deployment.

Remote Software Engineer & Server Administrator - UAE-based Trading Brokers | Remote | 2024 - Apr 2026

- Built CRM platforms and trading bridge/integration solutions for brokerage operations and partner companies.
- Managed and monitored 6-7 Linux servers per project, including deployments, stability, maintenance, backups, updates, and high-availability remote services.
- Automated deployment workflows and server health checks and coordinated remotely with UAE stakeholders to deliver scalable, reliable business systems.

Accounting Systems & Server Administrator / General Accountant - Al-Rayyan & Al-Taqwa – Al-Fajer Electric Power Companies | Damascus, Syria | Jan 2025 - Present

- Administer the accounting applications and server environments supporting day-to-day operations for electricity-sector companies.
- Maintain application availability, deployments, backups, updates, data integrity, access, and troubleshooting for accounting and operational systems.
- Support accounting operations, ERP workflows, reporting, and internal automation while coordinating multi-company software and infrastructure needs.

Full-Stack Developer - Design4 Net | Remote | Mar 2024 - Present

- Developed a school management system using Angular, Laravel, and MySQL, including dashboards and secure CRUD modules.
- Built, tested, and integrated REST APIs using Postman in production-like environments.

Accountant & Python Developer - Al-Tahrir Electric Power Company | Rif-Dimashq, Syria | Sep 2024 - Jan 2025

- Designed and implemented a Python desktop accounting application and improved reporting workflows.
- Produced network-loss, theft-detection, and electricity-pricing calculations and models.

Frontend Developer - Asas Technology | Iraq (Remote) | Jan 2023 - Feb 2024

- Developed and optimized a React/Next.js news platform with performance and user-experience improvements.

Accountant - Al-Radwan Electric Power Company | Damascus, Syria | Sep 2019 - Aug 2024

- Managed high-volume financial operations, reconciliations, and reporting for 3,000+ customers, strengthening accuracy, discipline, and operational reliability.

EDUCATION

- Bachelor's Degree in Electronics Engineering - Aleppo University | 2007 - 2012

CERTIFICATIONS

- Electronics & Communication - Aleppo University

LANGUAGES

- Arabic: Native | English: Professional proficiency

TECHNICAL KEYWORDS

Linux, Ubuntu, Debian, CentOS, Nginx, Apache, PostgreSQL, MySQL, MariaDB, Redis, Docker, Docker Compose, Git, Bash, Python, FastAPI, Laravel, REST APIs, Prometheus, Grafana, Alertmanager, Zabbix, Firewall, UFW, iptables, Fail2Ban, SSH, SSL/TLS, Cloudflare, Load Balancer, Backup & Restore, Monitoring, High Availability, Troubleshooting, System Hardening, PgBouncer, Alembic, systemd, cron, TCP/IP, DNS, Locust.
